## Printer uses low-VOC solid ink for green operation

The ProSeries NP 192 Solid Mark Printer from FoxJet combines high speed, versatility, ease of use and environmental friendliness.

The NP 192 produces crisp, dark and durable codes and marks on porous and non-porous substrates. It can print text, logos, graphics and internal bar codes, in print heights up to 0.4 inches and up to five lines at a time.

The NP 192 Solid Mark Printer uses resin-based solid black ink low in volatile organic compounds (VOCs) to improve the air quality within the plant, as well as the general environment. This fits with the demands many trade customers are making for more ecologically friendly packaging materials. It is a great alternative to expensive labeling, hazardous continuous ink jet, and low-resolution valve-jet printers and hot stamp imprinters.

This printhead works with FoxJet's state-of-the-art industrial ink jet controllers—the Marksman Pro, Marksman Duo and Marksman Net—giving the user the ultimate in ease and control.

FoxJet is working hard to make it easy for manufacturers to go green. In addition to the reduced VOCs offered by the ProSeries NP 192, FoxJet's high-resolution large-character printing solutions reduce corrugated waste. By using these FoxJet systems for online printing, you eliminate the need for preprinted boxes and the waste associated with obsolete preprinted information.

■ **SPEED:**

200 feet per minute

■ **PRINT HEIGHT:**

0.1 to 0.4 inches

■ **LINES OF PRINT:**

One to five lines

■ **ORIFICES/CHANNELS:**

192/32
