■ LABELING; T-E BANDING

Easy-to-operate T-E bander targets entry level users

As a global player, Marburg Industries serves the food and beverage markets. For more than three decades, the company has created a variety of production equipment for the automatic application of decorative labeling and tamper-evident packaging. Systems include neck and body banders and full-body labelers.

One of its top sellers is the M5/M6 Entry Level automatic cap sealer. It applies a heat-shrinkable band from rollstock to container necks to provide tamper evidence. Suitable for entry-level situations, the M5/M6 features a simple design and a user-friendly interface, making it easy for line personnel to understand and operate.

Made of stainless steel for easy washdown, the M5/M6 boasts a five-minute changeover. Sizes range from 25 to 90 millimeters for the M5 and from 25 to 122mm for the M6, with band heights from 1 to 3 inches.

The compact unit integrates well into packaging lines and runs at speeds of 100 units per minute (higher speeds are also available). A bottle spacing wheel simplifies container handling for proper orientation and band application. When the sensor detects a container, a plunger pushes the band down. The band is held at a slight angle (relative to the container's path), with the downstream portion lower than the upstream portion. By applying the band at this angle, it aligns itself with the container during application.

Options include horizontal or vertical perforation; registration of printed film; infeed/outfeed conveyors; heat shrink tunnels; and heat tunnel lifts.

- **SPEED:**
100 bottles per minute
- **FOOTPRINT:**
21 x 36.5 x 58.5 inches
(plus infeed/outfeed conveyor)
(length x width x height)
- **POWER:**
120 VAC
